Methodology Update

The methodology for calculating funding gaps developed in T. McManus [1] has been updated to improve accuracy and consistency across different funding channels.

Key changes:

- Analysis of FIR, T3010 and school board funding now include data through 2024, 2023 and 2024, respectively.
- The population threshold for inclusion in the Ontario average has been increased from 50,000 to 300,000 residents. This change limits comparisons to larger municipalities with comparable service needs, funding structures, and accounting practices to York Region (see Table 1 for a full list of key comparators).
- The geocoding workflow was rebuilt to improve match quality and consistency between t3010 files and official Ontario Municipalities. This change improves the accuracy of municipal assignments for nonprofit organizations, particularly those located in unincorporated areas or with ambiguous addresses. The R source code for the geocoding process is available at context-dependent/peel.funding.two. It uses the `tidygeocoder` (J. Cambron, D. Hernangómez, C. Belanger, and D. Possenriede [2]) package with the Mapbox API to resolve approximate locations based on postal codes.
- The set of registered charities used to calculate nonprofit funding gaps has been refined to focus strictly on organizations providing poverty relief and community resources. The more narrow focus allows our analysis to better isolate funds that are being spent on services for York Region residents, and the simplified inclusion criteria improve reproducibility (see Table 2 for a full list of included categories).
